### Practical advice

Industrial adaptors are accessories to electrical installations and must be used correctly:

- Do not use in locations with explosion or fire hazard.
- Suitable only for portable and temporary installations. A proper electrical system must be provided for stationary and permanent installations.

- Do not leave plugged in when not in use.
- Do not modify the IP protection degree against ingress of solids and liquids.
- Suitable for portable connections.
- Extension cables must always be of suitable length and cross-section to withstand drops in voltage and current carrying capacity.

The metal handle makes it much easier to carry the adaptor and allows it to be hung up using well-placed hooks.

The switch can be padlocked in either the open or closed position. The rated current is 16A.

Zinc-plated steel carrying handle.

- Equipped with PG21 cable gland, cable clamp and terminal block.
- IEC 309 plugs and socket outlets for industrial applications with IMQ approval.

#### The interlocked-switch socket outlets

SCAME's interlocked-switch socket outlets are fitted with a mechanical interlocking device which prevents the switch from closing if the plug is not inserted and the plug from being withdrawn if the switch is closed.

As a second interlock the switch can be padlocked both in closed and open positions.
